

Homology, Homotopy and Applications

Volume 2 (2000)

1. Stripping and conjugation in the mod p Steenrod algebra and its dual Dagmar M. Meyer	1–16
2. Truncations of the ring of number-theoretic functions Jan Snellman	17–27
3. On the cohomology of some Hopf algebroids and Hattori-Stong theorems Andrew Baker	29–40
4. The low-dimensional homology of crossed modules N D Gilbert	41–50
5. Homological Perturbation Theory and Associativity Pedro Real	51–88
6. Continuous family groupoids Alan L. T. Paterson	89–104
7. More about homological Properties of precrossed modules Nick Inassaridze and Emzar Khmaladze	105–114
8. Erratum to "On spaces of the same strong n -type" [HHA, v. 1 (1999) No. 10, pp. 205-217] Yves Félix and Jean-Claude Thomas	115–118
9. Topological K -theory of the Integers at the Prime 2 Luke Hodgkin	119–126
10. KK -theory as the K -theory of C^* -categories Tamaz Kandelaki	127–145
11. On the Freyd Categories of an Additive Category Apostolos Beligiannis	147–185

Homology, Homotopy and Applications (ISSN 1512 - 0139) is the all-electronic, refereed journal on Homological and Homotopical Algebra and their applications in the mathematical sciences.

The influence of homology and homotopy is found in many fundamental domains of mathematics and the aim of “Homology, Homotopy and Applications” is to unify such applications, to show its merit, importance and diversity and to present in time to its reader new information about the progress of the area and the relationships with other fields.

To this end “Homology, Homotopy and Applications” will publish carefully refereed significant and original research papers and expository survey papers of high level in the area, as well as research papers having substantial applications of results and technique of homological and homotopical algebra, for example to general algebra, algebraic topology, algebraic homotopy, algebraic geometry, K-theory, category theory, computer science, Galois theory, functional analysis, algebraic number theory, differential geometry and topology.

Articles appearing in the journal have been carefully and critically refereed under the responsibility of members of the Editorial Board. Only papers judged excellent are accepted for publication.

The method of distribution of the journal is via Internet tools ([www](http://www.ftp), <ftp>, etc.)

The journal is archived electronically and in printed paper format.

Subscribers to the journal receive abstracts of accepted papers by electronic mail. Compiled \TeX (.dvi) and Postscript files of the full articles are available by [www/ftp](http://www.ftp).

The journal is free to individuals.

University Departments, Libraries, and other institutional subscribers are invited to consult with the Editor-in-Chief about subscription and archiving. Authors retain copyright to articles appearing in the Journal. The Journal is copyrighted by its Editorial Board. For further information, contact the Editor-in-Chief, Hvedri Inassaridze, hvedri@rmi.acnet.ge.

Homology, Homotopy and Applications uses the \TeX typesetting system to define its contents and the Internet to disseminate them. Authors are invited to submit articles to any member of the Editorial Board and the Editor-in-Chief in any standard flavour of \TeX (i.e. plain, \LaTeX , AMS-(La) \TeX). \TeX source files may be submitted by email directly to only one member of the Editorial Board.

Accepted papers will be archived electronically in DVI and Postscript format by the journal. A printed paper version of each article in the journal is archived in the Razmadze Mathematical Institute library.

EDITORIAL BOARD
