

Homology, Homotopy and Applications

Volume **10**(1), 2008

1. Splittings in the Burnside ring and in SF_G Christopher P. French	1–27
2. Excision for K -theory of connective ring spectra Bjorn Ian Dundas and Harald Øyen Kittang	29–39
3. The Euler characteristic of a category as the sum of a divergent series Clemens Berger and Tom Leinster	41–51
4. On affine morphisms of Hopf algebroids Geoffrey M.L. Powell	53–95
5. Deformation bicomplex of module algebras Donald Yau	97–128
6. Inertia and delocalized twisted cohomology Ulrich Bunke, Thomas Schick and Markus Spitzweck	129–180
7. Cofibrant objects among higher-dimensional categories François Métayer	181–203
8. Betti numbers of random manifolds Michael Farber and Thomas Kappeler	205–222
9. Group elements conjugate to their powers and Bass’ conjecture Dimitrios Panagopoulos	223–236
10. Group homology and extensions of groups Ioannis Emmanouil and Inder Bir S. Passi	237–257

continued on the facing overleaf

11. A refinement of multi-dimensional persistence Kevin P. Knudson	259–281
12. Cotorsion pairs and degreewise homological model structures James Gillespie	283–304
13. On the homotopy theory of n -types Georg Biedermann	305–325
14. A new higher homotopy groupoid: the fundamental globular ω -groupoid of a filtered space Ronald Brown	327–343
15. Strong excision and strong shape invariance are equivalent for homology theories on the category of compact metric pairs Peter Mrozek	345–351
16. Towards a homotopy theory of process algebra Philippe Gaucher	353–388
17. On the algebraic classification of K -local spectra Constanze Roitzheim	389–412
18. The Bousfield lattice for truncated polynomial algebras W. G. Dwyer and J. H. Palmieri	413–436
19. On the homotopy groups of toric spaces David Allen	437–479
